2. Executive Summary

2.1 atQor Introduction

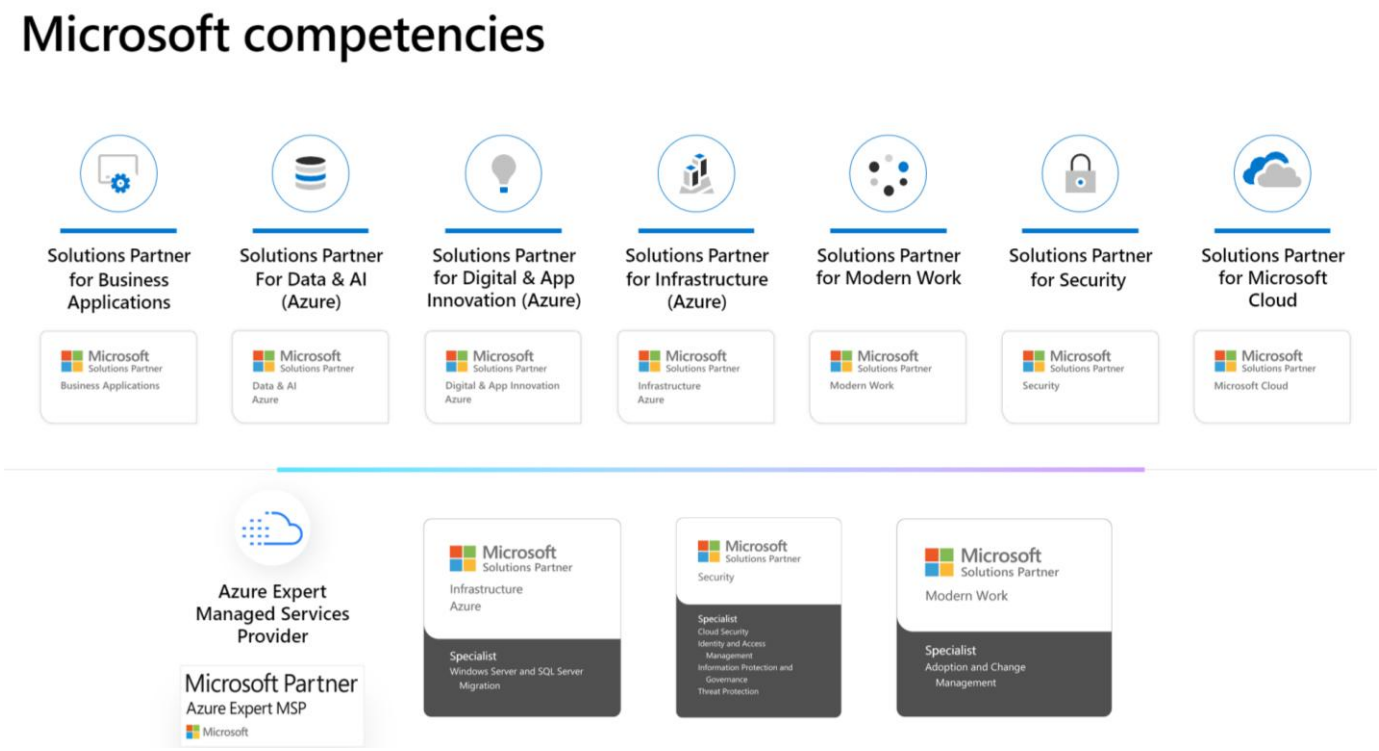

atQor is a Microsoft Solutions Partner with a proven track record of delivering transformative business solutions using Microsoft technologies. With decades of experience in digital transformation and enterprise technology, atQor specializes in implementing comprehensive business application platforms that enable organizations to streamline operations, improve customer engagement, and drive growth.

Key Strengths and Achievements:

- Microsoft Business Applications Solutions Partner Designation: atQor has earned this prestigious designation under the Microsoft Partner Program, reflecting our deep expertise and proven success in deploying Dynamics 365 solutions across Sales, Customer Service, and Marketing.
- 2024 Microsoft India and South Asia Partner of the Year for Business Applications: This recognition underscores our leadership in delivering innovative solutions that leverage Dynamics 365 and Power Platform to empower businesses.
- Extensive Expertise in Dynamics 365: Our team of certified professionals brings extensive experience in implementing Dynamics 365 Sales, Marketing, and Customer Service modules, with a focus on seamless integration, data migration, and process optimization.
- Global Delivery Excellence: Leveraging our robust onshore and offshore capabilities, atQor ensures efficient project delivery, comprehensive support, and cost-effective solutions tailored to each client's unique needs.
- Industry-Specific Insights: With experience across multiple industries, including hospitality, financial services, and professional services, atQor understands how to align technology with business goals to deliver measurable outcomes.

By partnering with atQor, Arvind Limited will gain access to an HR Bot which will assist them in first level screening of candidates.

atQor's commitment to excellence, paired with our alignment with Microsoft's latest technologies and priorities, makes us an ideal partner to drive Arvind's digital transformation journey.

In Microsoft Cloud Partner Program (launched in Oct 2022 by retiring old gold and silver partnership), atQor has all six-solution area expertise and solution partner status and by virtue of it, also has over all Microsoft Cloud Partner solution badge awarded by Microsoft. Microsoft has also recognised atQor as one of the first partner in the world to achieve such competency in all Microsoft cloud technologies.

We hold specialities in SharePoint Deployment, CoPilot AI, SharePoint Architect & Development, Business Intelligence, Collaboration, Private Cloud -Virtualization and Management, Application Lifecycle Management, Power BI, Microsoft Azure, Microsoft Power Platform, SharePoint Migration, Microsoft Teams, Microsoft Power Automate, Microsoft Teams Development, Application Development, Cloud Security, Microsoft 365, Intune, EMS, Microsoft Project, and Dynamics 365.

2.2 Why atQor?

Aspect	atQor's Strengths	Value to Clients
Microsoft Expertise	Designated Microsoft Solutions Partner for Business Applications with deep expertise in Dynamics 365 and Power Platform.	Ensures seamless implementation and alignment with Microsoft's best practices and technology roadmap.
Proven Track Record	Recognized as the 2024 Microsoft India and South Asia Partner of the Year for Business Applications.	Demonstrates a strong history of delivering high-impact business solutions recognized by Microsoft.
Comprehensive Capabilities	Expertise across Dynamics 365 modules (Sales, Customer Service, Marketing), Power BI, and Power Automate.	Offers a unified platform approach to streamline operations, improve insights, and automate workflows.
Global Delivery Excellence	Balanced delivery model with certified teams across North America, India, and South Asia.	Ensures cost-effective solutions without compromising on quality or delivery timelines.
Industry Experience	Extensive experience in industries such as hospitality, financial services, manufacturing, and professional services.	Provides industry-specific insights to tailor solutions for unique business challenges.
Data and AI Leadership	Specialized in implementing advanced analytics and AI-driven insights within the Dynamics 365 ecosystem.	Empowers decision-making with actionable data and predictive intelligence.
Customization and Integration	Demonstrated expertise in migrating and integrating Dynamics 365 with tools like, Emailtopia, LinkedIn Sales Navigator, and PandaDoc through completed POCs and tailored demonstrations	Ensures seamless data flow between systems for enhanced efficiency and visibility.

Aspect	atQor's Strengths	Value to Clients
Customer-Centric Approach	Focused on delivering measurable business outcomes and fostering long-term partnerships.	Drives client success through tailored solutions and continuous support.
Scalable Solutions	Solutions built for scalability, leveraging Microsoft Azure and cloud-native technologies.	Future-proofs investments, ensuring flexibility for evolving business needs.
Recognition and Certifications	Teams certified across Dynamics 365, Power Platform, and Azure, with accolades for innovation and delivery quality.	Reflects credibility and ability to meet complex project requirements effectively.

3. Project Objective

To develop an intelligent, AI-powered chat bot that enables seamless interaction between user and their operational data by integrating production and profitability related data from SAP and worker data from HR app. The objective is to empower the management users with context-aware responses to their queries through a conversational AI agent such as profitability and the influence of various factors for any variation in profitability as compared to the budgeted values or in comparison with earlier months etc. This solution aims to enhance decision-making, improve operational transparency, and reduce the time and effort required to extract insights from complex datasets.

4. Proposed Scope

Functional Scope of work

User Access and Security

- Users will log in to the platform using their company credentials.
- Access to different parts of the solution will be controlled based on the user's role.

Data Structure and Organization

- Design how data is organized and connected to reflect real business needs in areas like HR, Production, Machine Downtime, and Profitability.
- Ensure the data setup supports fast and accurate information retrieval.
- Make sure the data structure helps the AI understand and respond to user questions correctly.

AI-Powered Assistance

- Use AI to understand user questions and figure out which business area they relate to.
- AI will use a mix of pre-built and custom rules to create accurate answers from the data.
- Answers can be shown as plain text, tables, or charts, depending on what the user prefers.

Chat-Based User Interface

- Web-based platform with both chat and voice capabilities, allowing users to log in and ask questions through either interface.
- The Solution will direct each question to the right AI helper based on the topic and preferred answer format.
- Users will see answers in a clear and interactive way—either as text, tables, or visual charts.

Conversation and Session Tracking

- Keep a record of all user chats to help personalize future interactions and improve the solution.
- Store session details so users can continue where they left off, even if they return later.

Technical Scope of work

Platform Authentication via Entra ID:

- Users sign in to the Azure Web App using Entra ID for secure authentication and RBAC enforcement.

Data Modelling:

- Define and optimize the logical and physical data models for on-premises SQL warehouse to ensure efficient query performance, high data integrity, and clear relationships among tables and entities.
- Validate that schema designs align with business requirements for HRMS, Production, Spinning, Stoppages & Profitability modules.
- Perform initial schema and table relationship analysis to support the AI Agents' semantic understanding (e.g., for query generation).

AI Agents & Orchestration: Use Semantic Kernel as an AI orchestrator to enable multi-agent solutions:

- The Table Identification Agent and SQL to NLP Agent interpret user queries and map them to the correct domain (HRMS, Production, Spinning, Stoppages & Profitability), as well as functional logic.
- Considered 30 views of SAP and that will store it as Physical table into synapse data warehouse and upon that generate SQL Query via AI.
- Considered 40 custom functional logic (Arithmetic Logic).
- The Text-Based, Tabular-Based, and Graph-Based Response Formation Agents finalize the user-facing answer in the requested format (e.g., text summary, interactive table, or chart-ready data).

Chat Interaction & Web App:

- Provide a web-based chat interface where Entra ID–authenticated users submit questions.
- Route user queries to the appropriate AI Agent(s) based on domain (HRMS, Production, Spinning, Stoppages & Profitability) and requested response type (text, table, or graph).
- Display chat results in multiple formats: text-based answers, tabular data, or graph-based visualizations.
- Voice-based input needs to be developed as part of chat interaction.

Chat History Management:

- Maintain conversation logs in Cosmos DB for personalization, context retention, and analytics.
- Implement session management using a persistent store called Cosmos DB.

Solution Design

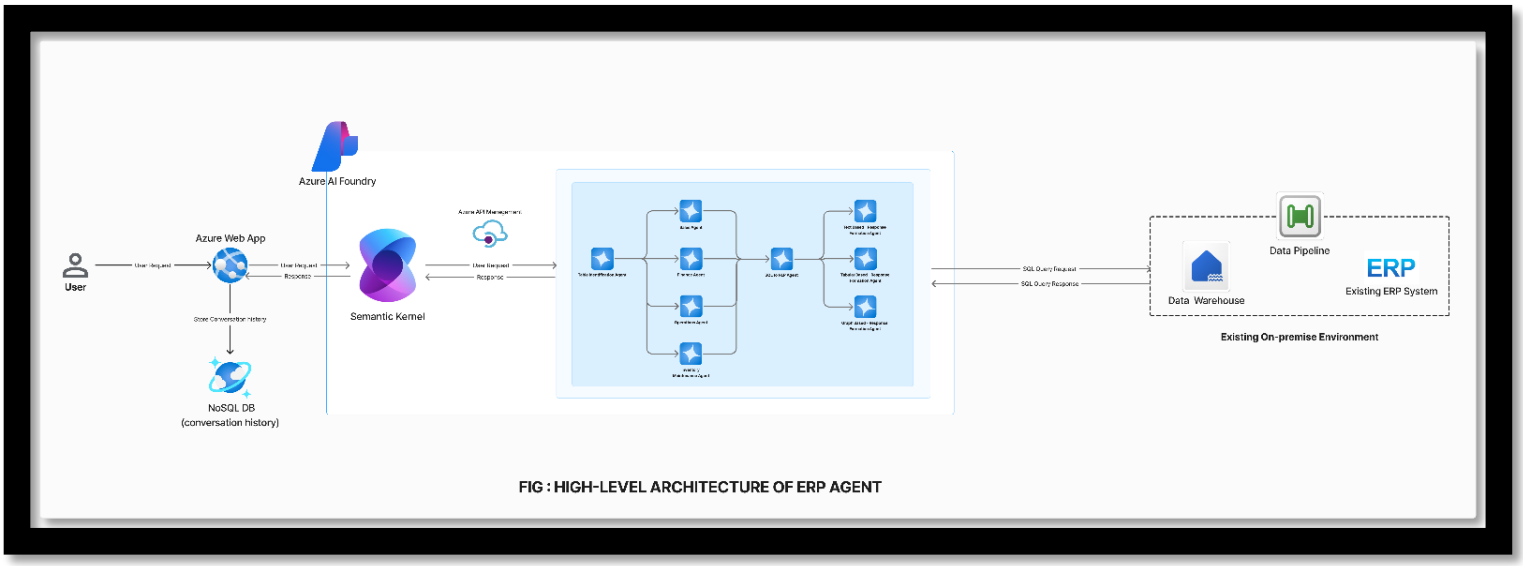

FIG : HIGH-LEVEL ARCHITECTURE OF ERP AGENT

Assumptions

Access of Data Warehouse

- Required read-only access with appropriate database roles will be granted to access all required databases and tables.
- The solution will not connect to SAP systems or interact with SAP APIs of any kind.

Data Volume & Structure Assumption

- It is expected to Arvind will have around 30 View on SAP and will store it that view as physical table into Synapse Data warehouse and that has an average of 20 columns per table.
- 30 SQL View will be created by Arvind Team only.
- 40 Functional Logic (Arithmetic Logic) will be created.
- Output rows in tabular format will be limited up to 50 only on the UI and any further increase will have CSV option for user to download the data.

Data Quality and Structure

- The existing Views is already structured and clean.
- The views from respective raw tables will be created by the Arvind's team.
- No additional data cleaning, transformation, or preprocessing will be required apart from standard data mapping and ingestion.
- Tables and columns required for each business domain (HRMS, Production, Spinning, Stoppages & Profitability) are well-defined and finalized before development begins.

- Any unstructured Data will not be considered this engagement.

Infrastructure & Azure Services

- Customer already has or will provision:
    - An active Azure subscription with required access roles.
    - Azure OpenAI service enabled and available in the appropriate Azure region.
    - Azure Entra ID is set up with access and all users will be authenticated through it.
- All Azure resource costs, quota allocation and management, and licenses are customer responsibilities.

Authentication and User Context

- All users accessing the chatbot will be authenticated using Microsoft Entra ID (M365) accounts.
- Required user profile attributes for personalization or access logic will be pre-configured in Entra ID.

Read-Only Query Access

- This solution is strictly read-only: it will only retrieve and visualize data from the SQL Data Warehouse only.
- Only for Creating store procedure we would require write access to enhance the performance of result.
- It will not perform any INSERT, UPDATE, DELETE, or writeback operations to any database.
- Generated responses include only text summaries, data tables, or charts based on existing data.

Data Modeling & Domain Inputs

- Customer will provide appropriate table and column descriptions, data types, and relationships.

Sample Questions & Prompt Engineering

- A list of representative queries and ideal responses will be shared by the customer to help guide prompt design, building functional logic and validation.
- Any significant expansion beyond agreed use cases (e.g., new modules/domains) will be considered out of scope.

SAP Integration

- There will be no direct interaction with SAP systems.
- Any SAP API integration, connectivity, or data access is explicitly excluded from this engagement.

Chat History

- Cosmos DB will be used to store chat history, Agents prompt, Manage user sessions.
- Additional analytics dashboards or insights are not part of the base scope unless explicitly added.

UI/UX:

- Minimal Front-End Complexity: Web app focuses on intuitive chat-based interactions rather than advanced UI.
- Solution will be hosted as an Application Website on Azure.

LLM Scope

- Work only upon 30 Views of table.
- Input queries will be provided in English language only as text and audio.
- Only English Content & Response: Multi-lingual or non-English text is out of scope unless specified.
- Role Based Access control upon AI response will not be considered in this engagement.
- Domain experts' collaboration is required to refine AI agent knowledge.

Stakeholder Involvement

- Client stakeholders, including Subject Matter Experts (SMEs), will be available for regular feedback, approvals, and decision-making throughout the project lifecycle.
- Business stakeholders will provide timely feedback for model fine-tuning and performance improvements.

Change Management

- Any deviation in terms of scope, requirements, or timeline after initial sign-off will require formal approval through a Change Request (CR) process.
- Support Post-Go-Live: 30 Days period of hyper-care support will be provided post-deployment of each Department to address critical issues. Long-term support and maintenance will require a separate agreement.

Azure Cost Estimation

- This estimate is provisional, as costs may fluctuate due to certain resources being dynamic. Therefore, the expense associated with these resources will depend on their utilization levels.

Prerequisites

- **Azure Subscription:** Active subscription with resource-group contributor access or subscription contributor access.
- **Azure OpenAI Service:** The Azure OpenAI service must be enabled on the given Azure subscription.
- **Application Administrator Role:** An Application Administrator role on Azure Active Directory (AD) is required to enable authentication on the web application.
- **SAP SQL View:** Arvind Team will be provided 30 Views on SAP.
- **Access to the Synapse SQL Data warehouse:** The account needs to have the correct database roles and permissions to read or view the necessary SQL Table View for solution development and integration.
- **User Authentication (Microsoft Entra ID):** Users must be authenticated using Microsoft Entra ID (formerly Azure Active Directory). The user account should belong to the organization's Microsoft 365

tenant. These attributes will be used by the AI Based Worker Agent for personalization, authorization checks.

- **Sample Questions and Answers:** A list of frequently asked or expected sample questions and their ideal answers must be provided. These will help in fine-tuning the prompt design, building functional logic, testing the AI Based Worker Agent, and validating the response quality.
- **SQL View:** Arvind's team will provide SQL Views out of the raw data and the same views will be leveraged to pull the data into the DW.
- **Table and Column Descriptions:** A detailed description of each table and its columns (including relationships and business context) must be documented. This is essential for building accurate, semantically meaningful queries through the AI agent.
- **Walkthrough of Tables and Data Understanding:** A walkthrough session to explain the structure and business meaning of the tables, it is required to ensure accurate interpretation and effective integration with AI agent. Additionally, also require session for functional logic understanding.

Service Components

- Azure Web App – Hosts the chatbot interface accessible via Entra ID sign-in.
- Azure Cosmos DB (NoSQL database) – Stores conversation history and user interactions and sessions.
- Azure Speech Services: to enable voice-based input functionality to solution.
- Azure OpenAI – Provides natural language processing capabilities using large language models like GPT-4o, essential for understanding user queries and generating meaningful responses.
- Azure OpenAI for Agents – Powers AI-driven virtual assistants for domain-specific chatbot interactions.
- Azure Entra ID – Manages identity and access control.
- Azure Functions – Hosts serverless logic (e.g., event-driven triggers, transformations).

Deliverables

Azure Resources Setup

- Provisioning and configuration of necessary Azure services required for the solution, including:
- Azure OpenAI Service.
    - Cosmos DB for storing user sessions, chat history.
    - Voice-based Input Chat interface.
    - Azure Web App for hosting the chatbot application.

Microsoft Entra ID Integration

- Setup and integration of Microsoft Entra ID for user authentication.

Web-Based Application

- Development of a web application with minimal UI complexity, focused solely on intuitive chat based. interactions (desktop-only, not mobile-responsive).

Follow-Up Question Functionality

- Implementation of AI-powered logic to handle follow-up questions by rephrasing unclear inputs using conversation context.

Out of Scope

Write Operations to Data Warehouse

- This solution will not include any INSERT, UPDATE, DELETE, or other write operations. It is strictly a read-only solution.

SAP Integration

- No integration with SAP systems or interaction with SAP APIs is included. Any such requirement will be treated as a separate scope.

Unstructured Data Handling

- The project assumes all data is structured. Unstructured data (e.g., scanned documents, free-text fields without schema, or media files) is out of scope.

Advanced UI/UX Development

- The web application will have minimal front-end complexity focused on chat-based interaction only. Advanced UI features like dashboards, rich visualizations, multi-page navigation, or mobile optimization are not included.

Multilingual Support

- Only English language input and output are supported. Any multilingual interaction (input or response) is out of scope unless explicitly agreed upon.

Real-Time or Streaming Data

- This engagement does not include real-time data ingestion, streaming data, or live dashboards.

Role-Based Access Control (RBAC) for AI Responses

- The chatbot will not implement RBAC logic to personalize or restrict AI-generated responses based on user roles or access levels.

Advanced Analytics & Reporting

- Generation of custom reports, predictive analytics, or BI dashboards is not part of the base scope.

Mobile or Cross-Platform App Development

- The solution is limited to a web-based application and does not include native mobile app development or integration with platforms like Microsoft Teams, Slack, etc.

Change Management or Ongoing Enhancements

- Post go-live change requests, enhancements, or extended support will be handled under a separate change control process or new agreement.

Non-Textual Input Processing

- The chatbot will only support text input. Voice, image, PDF uploads, or other file-based inputs are excluded from the scope.

Authentication Customization or SSO Extensions

- The solution will authenticate users via Microsoft Entra ID only. Integration with other identity providers or multi-tenant access setup is not included.

Large-Scale Domain Expansion

- Expansion to new business domains (beyond HRMS, Production, Spinning, Stoppages & Profitability) or modules not defined in the agreed dataset will be considered out of scope.

Storing User Activity or Audit Trails

- Tracking and storing detailed user activity logs or audit trails is not in scope for this solution.

Custom Notifications or Alerts

- Email, Teams, or other notification mechanisms are not included.

4. Hypercare Support

The Hypercare support is provided from the go-live date until the next thirty calendar days. This phase, also known as "Post go-live support," aims to optimize solution usage by assisting end users with their queries. During this period, no development work will be carried out except for addressing production or data-related bugs. If any issues are identified during this time that were missed during user acceptance testing (UAT), they will be addressed through the change management process. The purpose of this support is to provide assistance in querying and troubleshooting production issues to stabilize the process. Following the Hypercare period, the project will transition into a regular support model or the Application Maintenance Service (AMS) – this is optional and not required to be purchased along with this proposal.

5. Timelines

Phase	Feature / Module	Description	Timeline
Inception	Requirement Gathering, Planning & Infrastructure Setup	Gather requirements, scope definition, and environment strategy. Initial schema & table relationship analysis.	10
Solution Design	Solution Design & Architecture	Design architecture for a single web interface powered by Azure OpenAI. Define data flow from user query → SQL → Synapse → Response. Create Synapse data models, performance, and scalability plans.	5
UI/UX Development	**Frontend**		20
	Web-Based Chat Development	Build web-based chat interface	
	Tabular Based Response	Tabular response handling.	
	Graph Based Response	Graph Based response handling	
	Chat History Management	Session management	
	Backend & API		
	Web-Based Chat Development	APIs and backend logic for chat interaction	
	Tabular Based Response	Tabular response handling.	
	Graph Based Response	Graph Based response handling.	
	Chat History Management	Session management	
	Voice-Based Input functionality	Voice-Based Input functionality	
AI Agent Development	**AI Model & Integration**		
	Data Cleaning	Data Cleaning: Special characters are removed and strings normalized to ensure consistent formatting and safe SQL execution. Schema Profiling: Key metadata like column types, null counts, and uniqueness are extracted to support query generation and redundancy checks.	

	Data Modelling & Schema Profiling	Index Structure Based on Schema Elements. Semantic Search to Enhance Query Understanding. Generate content embedding for implementing Vector Search. Enrich Index with Metadata and Descriptions. Prioritize Key Schema Elements Using Custom Scoring Profiles. Use Filters and Facets for Contextual Retrieval. Store Synonyms and Related Terms to Enhance Retrieval. Functional Logic implementation	
	Building AI Agents	SQL Generator Agent, Executor Agent, Summarizing Agent, Tabular response Agent, Graph Generator Agent, Reviewer Agent, SQL View Creation based on Functional logic	15
	Orchestration Layer Development	Central coordination of agent activities. Table identification and workflow management. Resource allocation and conflict resolution.	
	Voice-Based Input functionality	Voice-Based Input functionality	
	Memory and State Management	Shared knowledge base for agents. Persistent storage of context and historical information. Transaction management across agent interactions.	
Functional Testing	Functional Testing	Verification of clause detection, Q&A results, and user flows	7
UAT & Bug Fixing	Testing & Validation	Unit, integration, and SME acceptance tests	5
Go-Live	Deployment & Documentation	Final deployment, user guides, and knowledge transfer	5
Hypercare Support	Post Go-Live Support	Support for 30 days post go-live for critical fixes	30
Total Estimated Timeline			**97**

6. Commercials

Azure Estimations

Service type	Region	Description	Remarks	Role of Services	Estimated monthly cost
App Service	Central India	Premium V3 Tier; 1 P1MV3 (2 vCPU(s), 16 GB RAM, 250 GB Storage) x 730 Hours; Linux OS; 0 SNI SSL Connections; 0 IP SSL Connections; 0 Custom Domains; 0 Standard SLL Certificates; 0 Wildcard SSL Certificates	considered 3 concurrent sessions & each will be consumed 0.6 vCore 3 GB RAM	The entire application will be hosted here. We have opted for a PaaS solution, which means you won't have to worry about operating system maintenance, as all of that will be managed by Microsoft.	₹12,262.80
Azure Cosmos DB	Central India	Azure Cosmos DB for NoSQL (formerly Core), Standard provisioned throughput (manual), Always-free quantity disabled, pay as you go, Single Region Write (Single-Master) - East US (Write Region), 800 RU/s x 730 Hours, 0 GB transactional storage, Analytical storage disabled, 2 copies of periodic backup storage, Dedicated Gateway not enabled	Considered 1200 RU	This will be necessary for maintaining user history and will also be required during follow-up questioning with the LLM.	₹3,987.90

Azure OpenAI Service	South India	Language Models, Standard (On-Demand), GPT-4o-2024-08-06 Global Deployment, 16,500 x 1,000 input tokens, 16,500 x 1,000 output tokens	Below is the consideration of Table Identification Agent Considered input Total = 5 (Number of Query) * 5 (number of users) * 50 token utilized per column * 30 tables * 20 column * 22 Days = 1,65,00,000 Considered output Total = 5 (Number of Query) * 5 (number of users) * 50 token utilized per column * 30 tables * 20 column * 22 Days = 1,65,00,000		₹17,604.98
Azure OpenAI Service	South India	Language Models, Standard (On-Demand), GPT-4o-Global-Deployment-128K, 4,950 x 1,000 input tokens, 990 x 1,000 output tokens	Below is the consideration of All the Domain Agent Considered input Total = 25 (Number of Query) * 1800 token utilized per table * 5 (Avg. Involvement of table for		₹3,380.16

			generating response) * 22 Days = 49,50,000 Considered output Total = 25 (Number of Query) * 1800 token utilized per response * 22 Days = 9,90,000		
Azure OpenAI Service	South India	Language Models, Standard (On-Demand), GPT-4o-Global-Deployment-128K, 19,250 x 1,000 input tokens, 1,485 x 1,000 output tokens	"Below is the consideration of Generating Response of AI Agents Input token = 25 (user query) * 50 tokens * 7 Average Column * 100 Average Rows * 22 Days then total would be consume input token = 192,50,000 Output token = 25 (user query) * (300 token (Text Response) + 1200 tokens (Tabular Response) + 1200 tokens (graph response)) * 22 Days then total would be consume Output token = 14,85,000"		₹10,117.00

Azure Functions	South India	Consumption tier, pay as you go, 128 MB memory, 1,00,000 milliseconds execution time, 1,00,000 executions/month			₹1,160.86
Azure AI services	Central India	Azure AI Speech, Pay as you go, Standard, Speech to Text, 44 Standard real-time transcription audio hours, 0 Standard fast transcription audio hours, 0 Standard batch transcription audio hours, 0 Custom real-time transcription audio hours, 0 Custom batch transcription audio hours, 0 Custom endpoint hosting models x 0 Audio hours, 0 Custom speech training compute hours, 0 Enhanced add-on real-time features x 0 Audio hours, 0 Conversation transcription multichannel audio hours	considered 2 hour per day transcription, so for 22 days it will be 44 hours.		₹3,755.73
Total					**₹52,269.43**

AtQor has worked out following commercial pricing.

Service Estimation

Description	Total Value in INR
Azure Consumption * This is estimated and actual will be as per the consumption.	INR 52,269/-
Service – Total resource cost	INR 1,950,000/-

Resource Type	Count
AI Developer	2
Solutions Architect	0.5
Data Engineer	0.5
Project manager	0.5
Total resources	**3.5**

Timeline 4 months

Milestone	Payment
Month 1 – Kickoff + Dev	487500
Month 2 - Dev	487500
Month 3 – Dev + UAT	487500
Month 4 - Support	487500

- Payment Terms
    - Billed on 1st of the month, invoice is payable within 7 days from the date of receipt of invoice.

7. Terms and Condition

The scopes of work & deliverables in the proposal are the results from the meeting and shared business requirements. Actuals may vary depending on further information from ARVIND LIMITED not included in initial discussions and not included in above SOW. Should there be any major change, or any unforeseen circumstance arise, both ARVIND LIMITED and atQor will agree to address the resulting impacts on the project plan mutually.

- The Purchase Order along with the signed contract to be released on the name of atQor Technologies Private Limited.
- Any taxes, if applicable, are payable additionally.
- atQor is not liable for the delays caused by circumstances that are not within atQor responsibility and control.
- Azure Consumption Invoice is payable within 7 days from the date of receipt of invoice.
- Any additional expenses like travel, instance, licenses etc. must be organized by the customer.
- The project will be carried out virtually.
- The estimated timeline and cost are based on the current understanding of the scope. Any deviations in terms of complexity and depth identified during the discovery sessions will impact both the timeline and estimates.
- The project engagement will be conducted remotely and required travel expenses will be billed on actual.
- Working days for the project are from Monday to Friday, excluding public holidays.
- Any additional request that falls outside the defined scope will need to be requested through the change order process. Once approved, they will be included in the project and billed on a time and material basis.
- Any consulting resources required after the go-live of this project will be available and billed on a time and material basis or under AMC.
- The Project Owner from Customer will monitor the project progress and will serve as the decision-maker, ensuring a 48-hour turnaround time for policy decisions.

- Customer will provide a suitable working environment, including adequate IT and non-IT facilities, as well as a solid understanding of the business requirements for atQor's consultants to perform their assigned duties.
- Customer will be responsible for any licensing/subscription costs associated with this project and licenses may vary depending on multiple factors.
- The project will be carried out virtually.

8. Sign-Off

The Project Scope and the commercials would be binding and final for the complete development under this contract. Any development/implementation/consultancy which is not covered under the Project Scope would be considered as a Change Request and extra charges would be levied as per actual.
